

SPADE BUCKETS

The Mongo Attachments Spade Buckets out-dig all standard trenching buckets. The buckets' flat bottoms and tapered side walls are designed for optimum capacity and easy clean-out. These buckets will make any trenching job easier and allow you to dig with precision right up to a building/foundation and get around existing utility lines.

- Digging depths are the exact size needed for footers and are larger than standard trenching buckets
- Straight bucket design creates perfect right angles and clears more material per cycle
- Machine specific-coupler included

PRODUCT SPECIFICATIONS

Model	Size	Compatible Machine Size	Weight Without Mount	Number of Teeth	Digging Depth
